

ABSTRACT

A device for the fixation of dimensionally stable suitcases, for example, for the cargo space of a motor vehicle. Receiving tracks are provided in a cargo space floor, which tracks are associated with securing means for the suitcases, corresponding securing elements are provided on the suitcases, which can be engaged with positive lock with securing means in the cargo space, and actuation means are provided, in the cargo space or on the suitcase, for the manual separation of the securing means and the securing elements from each other, for use, for example, in station wagons.
